Invenergy Completes Financing for the 120 Megawatt Expansion of its Scurry County Texas Wind Farm

CHICAGO – October 5, 2007 – Invenergy Wind LLC (“Invenergy”) announced the successful closing of construction and equity financing for the 120 MW expansion of its Camp Springs Wind Energy Center in Scurry County, Texas. The construction loans were provided by Prudential Capital Group and JPMorgan Chase Bank, N.A. The equity will be provided by a consortium of investors led by JPMorgan Capital Corporation including affiliates of JPMorgan, Prudential Capital Group, Morgan Stanley, Northwestern Mutual, Wells Fargo and Invenergy.

James Murphy, Invenergy’s Chief Financial Officer, stated “We are very pleased to complete another unique financing. By utilizing a common investor group across the construction and permanent capital sources, we were able to streamline the financing process and realize significant savings in transaction costs.”

The expansion project is expected to be completed in early 2008 and will bring the Scurry County wind farm to 250.5 MW. Strong support from officials with Scurry County, Western Texas College and the Hermleigh and Snyder Independent School Districts was instrumental in helping both phases of the project move forward on a fast track basis.

The project interconnects with Oncor, the transmission affiliate of TXU and all power will be sold into the ERCOT market. Energy price risk is hedged through long-term agreements with Fortis Energy Marketing for the first phase of the project and Credit Suisse Energy for the expansion. All 250.5 MW will be generated using GE 1.5MW SLE wind turbines. The balance of plant including access roads, foundations, electrical collection systems and turbine erection is being constructed by DH Blattner and Sons.

About Invenergy Wind LLC

Chicago-based Invenergy Wind LLC is an affiliate of Invenergy LLC, a developer, owner and operator of utility-scale electricity generating facilities including wind energy and natural gas-fired projects. Invenergy Wind currently has 12 facilities representing more than 1,300 megawatts of wind energy projects in operation and construction in the US and Europe. Wind energy projects completed and under construction by Invenergy Wind are expected to generate more than 3.6 billion kilowatt hours of electricity per year with clean and renewable generation technology, enough to power almost 400,000 homes.

Invenergy is headquartered in Chicago and has North American offices in Denver, Washington D.C., Toronto, Milwaukee, Tampa, San Francisco and Austin, Texas. Overseas offices are located in London, Warsaw, Budapest and Athens.
