----------------	---	---	------------------------	------------------------------------	----------------------------------

Notes:

1. The essential terms of a standard wind lease grant the wind company the right to install wind turbines, cables, roads, and other facilities on the property and the right to operate such facilities for a period of 20 years or more. In exchange the landowner is paid an annual fee based on the number of turbines installed on the property.
2. Compensation depends on number of turbines on the property, revenues received from turbine operation, which in turn vary with wind and energy prices.
3. The essential terms of a standard setback waiver are that the Owner executes a recordable statement to the effect that he/she does not object to wind turbines being installed at locations near their property line or residence that may be closer than may be otherwise allowed by local law. In exchange the wind company pays the owner a lump sum fee upon construction of the project, or lesser fees paid over the life of the project.
4. Unless noted otherwise, all agreements are in place as of the date of this table.
