Notes:

- 1 All noise levels in this table are A-weighted statistics in units of dBA
- 2 Distances to turbines are the distance from the house to the turbine hub at 80m above ground, and thus are slightly larger than the distance to the turbine base.
- 3 FEIS Results for wind speeds below 3 m/s include the sound levels of pad-mount and main substation transformers.
- 4 Annual average Leq calculated using annual average hub height wind distribution for the project area.
- 5 Annual average Lnight and Ldn calculated using annual average hub height wind distribution for the project area for nighttime hours.
